CFR

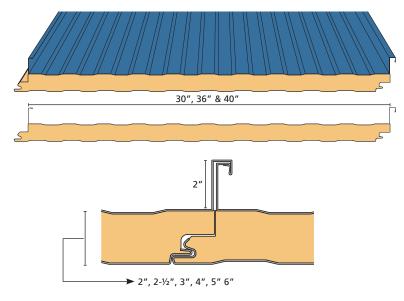

The **CFR** panel is an insulated metal standing seam roof panel, combining durable interior and exterior faces with a polyurethane foam core.

CFR roof panels have a wide coverage area between side joint connections and a mechanically-closed standing seam that is 2" high. Between the seams is a Mesa pattern with stucco embossing for added strength and superior appearance.

The CFR roof panel's diaphragm strength can be integrated into many steel-framed building bracing designs by attaching panels with the exclusive Clinch Clip[®]. Adjacent roof panels are interlocked without fastener penetrations that may compromise weathertightness or necessitate costly below-roof installation.

FEATURES AND BENEFITS:

- Provides a standing seam exterior face for weathertight performance.
- CFR roof panels are installed completely from the top side with concealed clips and fasteners placed in the side joint.
- Factory-cut panel ends, factory notching and factory-swaged ends eliminate critical and extensive field reworking.
- Factory-installed backer plates at the endlaps eliminate predrilling for special fasteners and tools.
- Recommended for the exterior of cold storage buildings.

USES AND APPLICATIONS

In new and retrofit construction, CFR roof panels are suitable for all types of architectural, cold storage, commercial and industrial applications including reroofing.

They are ideally suited for:

ARCHITECTURAL

- Airport Terminal Buildings
- Arenas
- Convention Centers
- Hospitals
- Low and Mid-Rise Offices
- Performing Arts Centers
- Schools & Universities
- Worship Facilities

COMMERCIAL & INDUSTRIAL

- Distribution Centers
- Equipment Maintenance Buildings
- Hangars
- Manufacturing Facilities
- Retail Buildings
- Self-Storage Complexes
- Utility Buildings
- Warehouses

COLD STORAGE

- Cooler Buildings
- Freezers
- Food Processing Buildings
- Dry Goods Warehouses
- All Controlled Environment Buildings where temperature control and insulation values are critical
